

1 **ABSTRACT OF THE DISCLOSURE**

2 A trading method to accommodate two trading channels has a dynamic
3 distribution step between a web trading channel and a real world trading channel. When
4 each trading channel has ordering process, the dynamic distribution step is executed to
5 recalculate the two allotments of allocable units in the two trading channels and updates
6 the two latest allotments in the two trading channels. Therefore, the method not only
7 gives the company the best economic benefit but also customers get the latest ordering
8 allotments.
